DESIGN PROPOSAL · FOR INTERNAL REVIEW

WEBSITE REDESIGN — VISUAL DIRECTION

A professional treatment for Amazon Mineworks' navy & red brand — built and running, not just mocked up.

AMAZON MINEWORKS

PREPARED 23 JULY 2026

01 — FINDINGS

What wasn't working

Before changing any layout, here's what the live build was actually doing — the concrete reasons it read as unfinished rather than corporate.

- **The body font never loaded.** Every stylesheet referenced "Jacques Francois" for headings, but it was never linked anywhere — so the browser silently fell back to the OS default (Arial/Helvetica) on every single page.

- **The hero was a floating translucent box.** A centered red panel sat on top of the site photography, competing with it instead of using it — a pattern common to template kits.

- **The "Trusted by" section showed the wrong logos.** It was rendering placeholder stock marks — "CoalPurity," "Bear Core," "Ultra Prestigious" — with no connection to Amazon Mineworks' real partners.

- **Navigation disappeared on scroll.** The menu bar was only visible over the hero image; scroll past it and there was no way back to the menu without scrolling up.

- **Inner pages broke brand.** Services, Operations, Investors, Blog and Contact each carried their own hero banner in an identical red-to-teal gradient — a color pairing that appears nowhere else on the site or in the logo.

02 — REFERENCE POINTS

Does the industry really look like this?

Not identically — but there is a shared visual language across the global operators. It's less a fashion than a signal.

BARRICK GOLD · BHP · RIO TINTO · ANGLO AMERICAN · NEWMONT · GLENCORE

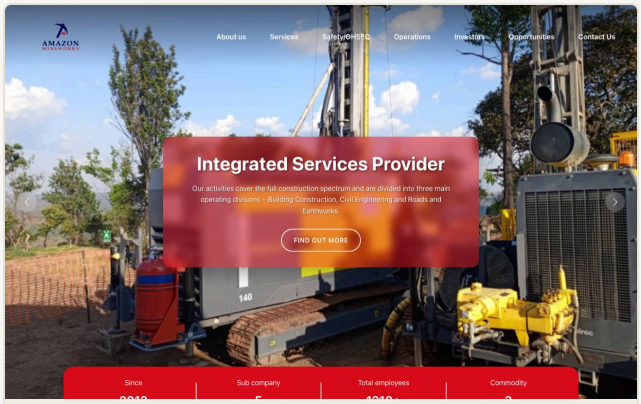

Across those sites: a dominant dark navy or charcoal ground, one disciplined accent color, bold condensed headline type, large equipment and site photography treated with a dark scrim for legibility, a persistent utility bar carrying contact and investor links, and key figures presented as a stat bar — production numbers, headcount, years in operation.

The audience for a mining contractor's site is rarely a retail customer — it's investors, regulators, mining houses vetting a contractor, and prospective hires. That visual weight reads as scale and operational seriousness to exactly that audience, which is why this direction was chosen over something lighter or more playful.

> This isn't the only valid direction. If you'd rather differentiate from that convention — a lighter, more minimal industrial-modern look, for instance — that's a legitimate alternative worth sketching before committing.

04 — ALSO REFRESHED

FAQ and inner-page banner

The same nav/banner system now carries through to the 50+ inner pages (Services, Safety, Investors, every drilling service page), so a visitor lands on a consistently branded page no matter where they enter the site.

INNER-PAGE BANNER — SERVICES

05 — DESIGN SYSTEM

Color & type

Navy and red are the logo's own colors, used consistently instead of the half-dozen ad-hoc hex values scattered through the old stylesheets. Gold is a restrained addition for accents that shouldn't compete with the red call-to-action color.

Navy	Navy 700	Red	Gold accent	Paper
#000154	#0a1a6b	#da0b19	#c8a24a	#f4f5f9

DISPLAY — OSWALD 600 — HEADINGS, NAV, BUTTONS

MINING & DRILLING SERVICES

BODY — INTER 400/600 — PARAGRAPHS, UI TEXT

We provide full-service mining, drilling, maintenance and geochemical analysis solutions to customers within the minerals industry.

— 06 — STATUS

Where this stands

BUILT

Implemented in code, not a mockup

Every screen in this deck is a real screenshot of the running app — header, hero, About, Services, Gallery, News, Jobs, FAQ, footer, and the shared inner-page banner.

ISOLATED

On its own branch

All changes live on `ui-professional-redesign`. The `main` branch — and the live site — are untouched until you approve a merge.

OPEN

~25 inner pages still carry old section styling

Services, Operations, Investors and the drilling-service pages now share the new navy banner and no longer clash in color, but the content sections further down those pages haven't been rebuilt yet.

OPEN

Decide on the reference direction

Confirm the navy/red "industrial authority" direction from page 3, or ask for a lighter alternative to compare before more pages are touched.
